

Why Choose Hyperspan?

Hyperspan is a revolutionary new addition to the steel fabrication sector. This ultra-lightweight Dynamic Steel Frame product is specially engineered to replace heavy structural steel elements. Ideal for lightweight builds, the Hyperspan frame's unique design makes it the strongest lightweight option available on the market.

Hyperspan Beam

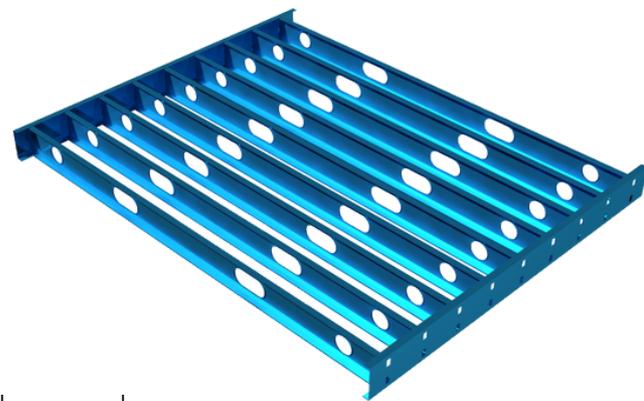

This lightweight beam is the perfect replacement for bulky structural steel. Its sturdy composition reduces the demand for large volumes of structural steel commonly used in commercial and residential projects.

Hyperspan is quick and easy to install reducing onsite labour costs and is customisable for each individual project. With spans of up to 7.5 meters long, Hyperspan serves as the longest spanning system in Victoria.

Hyperspan Flooring System

Our flooring system is both lightweight and high strength and can be used on both ground and multi-level floors of commercial and residential builds.

Manufactured with flared pre-punched service holes that allow for services including plumbing and electrical to be installed without modifications or damages from sharp edges.
